Full-Stack Engineer & Team Lead | 3+ Years Building Production Web Applications

Full-stack engineer with 3+ years shipping production web applications for enterprise and startup clients. Currently leading a 7-engineer team at **All Generation Tech** while working as an application engineer on the annuity platform **Alpha FMC** delivers for **American Equity Life**, built alongside Alpha's US team. Works end to end, from **TypeScript** and **Next.js** front ends to **Python** and **Node.js** services, rules engines, third-party integrations, and a recent voice agent on **LangGraph**. Deployments run on **AWS**, **Cloudflare**, and **Vercel**.

Technical Skills

Languages	:	TypeScript, JavaScript, PHP, Python, Java, Kotlin, C#, SQL, GraphQL, HTML, CSS/SCSS, Bash
Frameworks	:	Next.js, React.js, React Native, Node.js, Express.js, Laravel, Django, FastAPI, .NET, Tailwind CSS
Libraries	:	Zustand, TanStack Query, Zod, Prisma ORM, Drizzle ORM, LangGraph, LangChain, LiveKit, Selenium
Databases	:	PostgreSQL, MySQL, MongoDB, Redis, Supabase, Firestore, Cloudflare D1 & KV
DevOps	:	Git, GitHub Actions, Docker, Docker Compose, Kubernetes, Nginx, Traefik, Caddy
Cloud & Tools	:	AWS (EC2, Lightsail), Cloudflare (Workers, Pages, Access), Vercel, Firebase, Linux, WebSockets

Experience

All Generation Tech — Jul 2024 – Present
Remote – New York, USA

Application Engineer — Client: Alpha FMC – American Equity Life

- Building the full-lifecycle **annuity new business platform** American Equity Life runs on **Unqork**, delivered in sprints with Alpha FMC's US teams and presented at **Unqork Create 2026**.
- Wrote **EZ Suit**, the pre-suitability engine scoring assets, income, expenses, and existing annuities against eligibility, premium range, and replacement rules before an application starts.
- **MyApp** replaced their legacy **ReadyApp** e-application and runs on a **suitability rules engine** I built, automating pass/pend/fail decisioning with a manual review queue and syncing status to American Equity's **ODS**.
- Wired **PandaDoc** in for eSignature end to end, and built the pipelines normalizing **DTCC** fixed-position files, **Firelight** XML, and scanned paper into one data model. **Ignite**, the reps' CRM, covers NIGO resolution, GIACT validation, and **TX103** generation.
- Designed the **14-service architecture** underneath, standardizing routing and token caching to cut API round-trips. Agents sign in through **Okta** (OIDC), internal reps through **Azure AD** (SAML), across five personas.

AI Engineer — Client: Ink'd | Dec 2025 – Feb 2026

- Built a headless **voice AI agent** in **Python** that walks real estate brokers through contract intake by phone, orchestrated as a **LangGraph** state machine over **LiveKit** with Deepgram STT and Cartesia TTS.
- The graph validates property and party data field by field, decides which addenda apply, renders and merges PDFs from **S3** templates, then posts the contract to a **Django REST** backend fronted by **Next.js**.
- Answer extraction runs through an **LLM** client over **OpenRouter** against declarative field definitions, so a new contract type needs no new prompt code.
- Owned the **evaluation loop** in **Python**, replaying conversations through the graph headlessly and reading **LangSmith** and **OpenTelemetry** traces to catch where the agent misread callers before release.

Team Lead

- Lead a team of **7 engineers** staffed across concurrent **Alpha FMC** projects, from allocation through delivery oversight and escalation.
- Built the internal **workforce management platform** AllGenTech runs on (**Next.js**, **React**, **TypeScript**, **MongoDB**), covering time & attendance, overtime approvals, and payroll exports.
- Staffing dashboards feed a weekly **Slack** report on a cron; tickets sync both ways through the **Jira REST API**.
- Separately, architected a **multitenant medical and care center management system** on **Next.js** and **PostgreSQL**, and handled the **Next.js 16**, **React 19**, and **Tailwind v4** migrations while mentoring the team through **code review**.

Full Stack Web Developer May 2023 – Jul 2024
Upwork

- Shipped production web applications for international clients on **Next.js**, **Laravel**, and WordPress, owning each engagement from the first scoping call through post-launch support.
- Rebuilt corporate marketing sites around **Core Web Vitals** and accessibility.
- Designed custom **REST APIs** and refactored the backend logic behind them to hold up under load.
- Took over legacy codebases and cleared defects without taking live sites offline.
- Standardized deployment and environment provisioning so parallel engagements did not each need a bespoke setup.

Frontend Web Developer Apr 2023 – Jul 2023
Fiverr

- Built WordPress admin dashboards with **ACF**, **UiPress**, and custom hooks, shaped around how each client actually worked.
- Kept components modular so widgets could be restyled to a client's branding without a rewrite.
- Cut dashboard load times by tracking down UX bottlenecks and backend defects.

Self-Employed Feb 2019 – Jul 2023
WordPress Content Creator / Developer

- Ran my own **SEO**-driven WordPress properties and wrote the tooling that automated publishing.
- Self-managed the hosting on **AWS EC2** and **Lightsail**, including web server, TLS, and backup configuration.
- Automated content scraping and deployment with **Selenium** and the **WordPress REST API**.

Education & Certifications

Brac University **CGPA: 3.82**
Bachelor of Science in Computer Science *Jan 2020 – Jan 2024*

Claude Certified Architect - Professional *Anthropic* Sep 2026

Projects

Beyond The Fall - Storytelling & E-Commerce Site *Next.js, Three.js, WooCommerce, WordPress REST API*

- Built the 3D front end in **Three.js** and React Three Fiber. An interactive globe anchors the navigation, with a timeline explorer and journey selector layered over it.
- WordPress runs headless behind it, with a **WooCommerce** storefront handling catalog and checkout; wrote custom plugins to expose the **REST API** endpoints the front end needed.
- Responsive layouts throughout, with **Framer Motion** handling transitions between chapters.
- A discussion forum sits alongside user reviews and interactive quizzes.

AllGenTech.io - Public Company Platform *Next.js, MongoDB, Tailwind CSS*

- Built the public-facing company platform (services, industries, careers, and blog) as a server-rendered **Next.js** app.
- Job postings, candidate applications, and admin review run through a built-in **applicant tracking** flow.
- Tuned **Core Web Vitals** on a heavily image-led site, mostly through next/image and static generation with blur placeholders.

Kahoot Portal - Multiplayer Quiz App *Next.js, Supabase, Tailwind CSS*

- Real-time multiplayer quiz platform on **Next.js** and **Supabase**, keeping game state in sync across every client over **WebSockets**.
- Hosts get a dashboard for authoring quizzes and running live sessions, with players appearing as they join.
- Players see countdown timers and a live leaderboard, and can share results once a game ends.

Macro Deck Plugins - Teams, Zoom, Meet & Discord *C#, .NET 10, WinForms, Discord RPC*

- Authored and maintain three **Macro Deck** plugins for **Teams**, **Zoom**, and **Google Meet**, exposing mic, camera, and call join or leave as single-press deck actions.
- Contributed upstream to the community **Discord** plugin, porting it to **.NET 10** and adding voice, rich presence, and activity-join actions over Discord's local **RPC** pipe.
